**Generate Management Reports**

**"Acumen, aligning project management with business"**

# How do you get effective Project resources?

## Project Support Resourcing

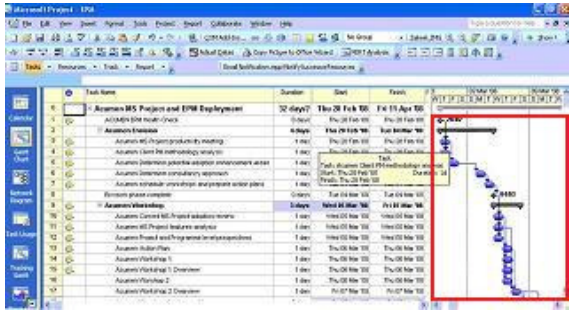
Over the past 5 years Acumen has provided resources so Project Managers can use their time more effectively by reducing their administrative overheads. Acumen has come up with a simple but powerful approach to help project management teams increase productivity by using flexible and skilled Project Support resources on an occasional or part time basis.

Project tasks such as updating actuals against the Gantt chart, resolving conflict in the resource pool, verifying time-sheets and generating check point reports are often more effectively produced by Project Support resources – that also understand the importance of processes.

Our teams of Project Support resources blend Microsoft Project skills with the ability to quickly adapt to clients' PRINCE2, ITIL, AGILE or BPM processes allowing our clients to realise benefits and reduce project overheads.

## Project Implementation Consultants

Acumen Project Implementation Consultants provide a cost effective highly skilled approach to implement Microsoft Project 2007 and EPM solutions - helping clients execute their adoption strategy or roadmap,



Acumen.
